User Guide

Network Set Up

If you have multiple stations, you will need to set up the network for the POS systems. Each POS station will need to have a fixed IP address so they can communicate with each other. In addition, windows firewall needs to be turned off.

To set up the fixed IP address, do the following:

1. Find the current IP address, by open the command prompt and type in ipconfig

- 2. Find the Default Gateway, for example 192.168.10.1
- 3. Go to the Network Connections and open the property dialog for the connection being used, Select Internet Protocol (TCP/IP), click on Properties:

Internet Protocol Version 4 (TCP/IPv	4) Properties	
General		
You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.		
O Obtain an IP address automatically		
• Use the following IP address:		
IP address:	192 . 168 . 10 . 200	
S <u>u</u> bnet mask:	255.255.255.0	
Default gateway:	192.168.10.1	
O Obtain DNS server address automatically		
Use the following DNS server add	resses:	
Preferred DNS server:	192.168.10.1	
Alternate DNS server:	· · ·	
☐ Validate settings upon exitAdv_anced		
	OK Cancel	

After the Fixed IP address is set up, go to c:\supermenu, open host.txt file and change the localhost to the fixed IP address of the server.
